

Växjö, the 16th of September 2015

To whom it may concern

I am fellow research at the Media Technology department at Linnaeus University. Mr Carlos Sirvent Mazarico has joined some of the research efforts that we have been conducting within the department and I would like to offer my view from the positive experiences that we gained working with him.

Mr Carlos Sirvent Mazarico started his efforts within the group with a scholarship that covered the period between January and June of 2015, and was involved mainly in two big research projects, namely TriGO¹ and JuxtaLearn. These projects are characterized by combining web and mobile technologies to create novel interaction techniques to support education and collaboration.

In these projects, Mr. Sirvent had a developer role under the supervision of project and research managers. However, Mr. Sirvent showed high potential in analytical skills, often offering suggestions for improvements in the systems under development.

From our collaboration, I can say that Mr Carlos Sirvent Mazarico is a person that has a competent background in software development, works very well in a team environment with a high level of proactivity and also offers leading role signs that are significantly beneficial for guaranteeing the project's final quality.

Based on the aforementioned limited but rather intense evidence, I recommend Mr Carlos Sirvent Mazarico for a position in your institution.

If there is any question regarding to Mr Carlos Sirvent Mazarico's reference, please feel free to contact me for further information.

Yours sincerely,

Didac Gil de la Iglesia
